

Some Rules of Thumb

M in Kg/mol, s in Svedbergs (10^{-13} sec), D in Ficks (10^{-7} cm² sec⁻¹),
 R_s in Ångstroms, $speed$ in rpm/1000, $\rho=1.000$ g/cc, $\bar{v}=0.725$ cc/g, $T = 293^\circ$ K.

Transport

$$M = 91 \frac{s}{D}$$

$$R_s = 215/D_{20,w}$$

$$s = 2.4M/R_s$$

$$f/f_o = 0.35M^{2/3}/s \quad (\delta_1 = 0.0)$$

$$f/f_o = 0.31M^{2/3}/s \quad (\delta_1 = 0.3)$$

$$D < 19.2/s^{0.5}$$

For the equivalent sphere

$$\delta_1 = 0.0$$

$$R_o = \frac{20}{3}M^{\frac{1}{3}}$$

$$s_o = M^{\frac{2}{3}}/2.8$$

$$s_o = M^{\frac{2}{3}} \left[\frac{(1-\bar{v}\rho)/\bar{v}^{\frac{1}{3}}}{0.8337} \right]$$

$$M = 4.7s_o^{\frac{3}{2}}$$

$$R_o = 7.35(M\bar{v})^{\frac{1}{3}}$$

$$\delta_1 = 0.3$$

$$R_o = \frac{30}{4}M^{\frac{1}{2}}$$

$$s_o = M^{\frac{2}{3}}/3.2$$

$$M = 5.7s_o^{\frac{3}{2}}$$

$$R_o = 7.35\{M(\bar{v} + 0.3)\}^{\frac{1}{3}}$$

For a prolate ellipsoid of revolution

where $a/b > 5.0$, $f/f_o = (a/b)^{\frac{2}{3}}/\ln(2a/b)$

For DCDT analysis

$$\Delta t/t = \Delta \ln(\omega^2 t) < \frac{70}{(M^{0.5} speed)}$$

$D = (\sigma\omega^2 tr_{men})^2/2t$ (where σ = std dev of $g(s^*)$ peak in svedbergs)

Sedimentation Equilibrium

For $\sigma > 2.0cm^{-2}$, where $\sigma \equiv d(\ln c)/d(r^2/2) = M(1 - \bar{v}\rho)\omega^2/RT = \frac{\omega^2 s}{D}$

$t_{eq,5^\circ} = 4.0 \times 10^4 / (s_{20,w}(speed)^2)$ hours ($\tau = 0.22$) (column height=3mm)

$t_{eq,5^\circ} = 1.7 \times 10^4 R_s / (M(speed)^2)$ hours ($\tau = 0.22$) (column height=3mm)

$t_{eq,5^\circ} = 3.66 \times 10^6 / (DM(speed)^2)$ hours ($\tau = 0.22$) (column height=3mm)

$t_{os}/t_{eq} = 0.134(\sigma)0.58 / ((\omega_{os}/\omega_{eq})^2 - 0.5)$

For $\sigma > 0$:

Compute time to equilibrium at any speed: http://rasmb.org/AUCRL/time_to_equilibrium-form.html

$speed_{eq} = 88[\sigma/M]^{0.5}$; $M = 7777[\sigma/(speed_{eq})^2]$, and $\sigma = M(speed_{eq})^2/7777$

For the random coil

$$\delta_1 = 0.0$$

$$R_s = 10.0M^{0.56}$$

$$s_{rc} = 0.24M^{0.44}$$

$$\delta_1 = 0.3$$

$$R_s = \frac{90}{8}M^{0.56}$$

$$s_{rc} = 0.21M^{0.44}$$

$$s_o/s_{rc} = 1.48M^{0.22}$$
